

Smart LED strip Dallas 3m Google Assistant, Alexa & Siri White + RGB Multicolor Konyks

Descriptif produit

Illuminate your rooms and control your LED ribbon with your smartphone or even with your voice!

Flexible and soft

The Dallas LED ribbon will bring a touch of fantasy to your interior. It is designed to decorate cornices, alcoves, etc. With its 3 meters of adjustable stickers, it is easy to install, ideal for lighting your wardrobes and dressing rooms. 16 million colours and adjustable white (warm and cold), it offers a real source of light to customize infinitely.

Easy range for an ultra-easy installation

The application detects the ribbon and the installation takes about 10 seconds - In case of Wi-Fi cut, the bluetooth takes over and you continue to control your devices locally.

Voice control

With Alexa, Google Home or Siri shortcuts you can control the light from your sofa with a simple voice command. For example "OK Google, turn the bar LED ribbon blue".

Control via Smartphone

Whether you're at home, in the office or anywhere in the world, you're in control of your devices. All you need is access to the internet, either Wifi or 4G, and you can control your devices, check their status or program scenarios or operating times.

Automate easily

The Konyks application makes it very easy to create scenarios (sequence of commands) or multiple conditional automations, for example: turn on the Dallas LED ribbon in the hallway in red when the door of the child's room opens between 8:00 pm and 7:00 am, and turn it off when the door closes.
